                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Submitted (13-007-1998) Laboratory of Genetics, University of Misconsin, 445 Henry Mall, Madison, WI 53706, USA
This sequence was determined by the B. coli Genome Project at the University of Wisconsin-Madison (Frederick R. Blattner, director). Supported by NIH grants HG00301 and HG01428 (from the Human Genome Project and NCHGR). The entire sequence was independently denome from B. coli KI1 strain MG1655. Predicted open reading frames were determined using GeneMark software, kindly supplied by Mark Borodowsky, Georgia Institute of Technology, Allanta, GA, 30332 [e-mail: mark@anber.gatech.edu]. Open reading frames that have been correlated with genetic loci are being annotated with CG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Blattner, F.R.

Site Nos., unique ID nos. for the genes in the E. coli Genetic Stock Center (GGS) database at Yale University, kindly supplied by Mary Berlyn. A public version of the database is accessible (http://cgsc.biology.yale.edu). Annotation of the genome is an ongoing task whose goal is to make the genome sequence more useful by correlating it with other data. Comments to the authors are appreciated. Updated information will be available at the E. coli Genome Project's World Wide Web site (http://www.genetics.wise.edu). *** The E. coli K12 sequence and its annotations are periodically updated; this is version M54. No sequence changes. Annotation updates: updated gene identifications and products; all new functional assignments courtesy of Monica Riley; added promoters, protein binding sites, and repeated sequences described in reference 1. The unique numeric identifiers beginning with a lowercase 'D' assigned to each gene (protein- or RNA-encoding) are now designated as gene synonyms instead of

Blattner, director) at the University of Wisconsin-Madison. Supported by award #G00301 from the NIH Human Genome Project. The entire sequence was independently determined from E. coli MG1655, overlaps and conflicts with other sequence determinations are annotated. The start of this entry overlaps the start of the entry ECUMW2 (L10328) by 547 bp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               / Organism="Bscherichia coli"

It currently consists of 6 concigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as true of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequencing vector: M13, 08

Gorlamore, A., Cook, A., Cooke, P. Corum, B. Dekrellano, K., Cooke, M., * NOTE: This is a 'working draft' sequence. It currently consists of 8 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 2 contigs.

* are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* 157397 157396: contig of 157396 bp in length

* 157397 163377: contig of 11881 bp in length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Insert size: 168000; agarose-fp

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Submitted (13-0CT-1998) Laboratory of Genetics, University of

Wisconsin, 445 Henry Mall, Madison, WI 53706, USA

This sequence was determined by the E. coli Genome Project at the
University of Wisconsin-Madison (Frederick R. Blattner, director).

Supported by NIH grants HG00301 and HG01428 (from the Human Genome
Project and NUGRR). The entire sequence was independently
determined from E. coli K12 strain MG1655. Predicted open reading
frames were determined using GeneMark software, kindly supplied by
Mark Borddowsky, Georgia Institute of Technology, Atlanta, GA,
30332 [e-mail: mark@amber:gatech.edu], Open reading frames that
have been correlated with genetic loci are being annotated with CG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AB000426 10240 bp DNA linear BCT 01-DEC-2000

Site Nos., unique ID nos. for the genes in the E. coli Genetic Stock Center (CSGC) detabase at Yale University, Kindly supplied by Mary Berlyn. A public version of the database is accessible (http://cgec.biology.yale.edu). Annotation of the genome is an ongoing task whose goal is to make the genome sequence more useful by correlating it with other data. Comments to the authors are appreciated. Updated information will be available at the E. coli Genome Project's World Wide Neb site (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and its annotations are periodically updated; this is version M54. No sequence changes. Annotation updates: updated gene identifications and products; promotetes: protein binding sites, and repeated Riley; added promoters, protein binding sites, and repeated sequences described in reference 1. The unique numeric identifiers beginning with a lowercase 'D' assigned to each gene (protein or RNA-encoding) are now designated as gene synonyms instead of labels. This should allow them to be searched for in Entrez as gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /gene= 711.7

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence was determined as part of the E. coli Genome Project (Frederick R. Blattner, director) at the University of Wisconsin-Madison. Supported by award #G00301 from the NIH Human Genome Project. The entire sequence was independently determined from E. coli MG1655; overlaps and conflicts with other sequence determinations are annotated. The start of this entry overlaps the start of the entry BC0UM82 (L10328) by $47 bp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /note="This sequence comprises the following lambda clones: EC19-98, EC72-73, EC17-131, EC30WMS, EC30-83, EC37-334, EC19-98, EC37-335, EC37-134, EC30WMS, EC27-336, EC37-1129, EC30WM9, EC27-239, EC30WM3, EC27-585, EC318-20, EC37-1135, EC30R3900-8B, EC30R3900-8B, EC39WM6, EC37-1135, EC30R3900-8B, EC30R3900-8B, EC39WM6, EC37-1135, EC30R3900-8B, EC30R3000-8B, EC30R300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            * NOTE: This is a 'working draft' sequence. It currently consists of 6 configs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as "runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       270 1369: contig of 1269 bp in length
270 1369: gap of unknown length
370 2935: contig of 1566 bp in length
373 3035: gap of unknown length
374 4616: contig of 1581 bp in length
4716: gap of unknown length
577 6291: contig of 1575 bp in length
578 391: gap of unknown length
579 8254: contig of 1863 bp in length
570 8354: gap of unknown length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequencing vector: Mi3; 0%

Center project Information
Center clone name: 118273
Center clone name: 200 D 15
Center clone name: 200 D 15
Sequencing vector: plasmid; n.d.; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.960731
Consensus quality: 165801 bases at least Q30
Consensus quality: 165803 bases at least Q20
Consensus quality: 165803 bases at least Q20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Insert size: 158000, agarose-fp

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AL772194 176496 bp DNA linear ROD 15-NOV-2002

consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length 166112;
